## Our Services

### Hospital Engineering

#### In collaboration with the architecture firm AART

- Design studies feasibility and engineering, assessment of budgets
- Design plans

Created in 1978 AART is an integrated multidisciplinary team of professional architects, planners and specialists.

AART is involved in architectural design and construction of large projects in France and abroad, with emphasis on public buildings, urban centers, hospitals and health care facilities following the constant evolution of architectural planning and design.

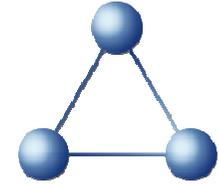

AART International is active in France as well as abroad, with important references in Europe, Africa and the Middle East.

AART's capacity, international experience and wide range of project skills enable us to take on large scale projects covering a comprehensive range of services from feasibility studies and planning through to every stage of project development and final project execution.

INTERNATIONAL

*Health everywhere, for everyone*

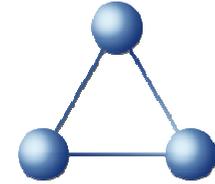

# CHOHAN GROUP

## Our Services

### Governance

In collaboration with the specialized company DENOS HEALTH MANAGEMENT, the suggested governance support, aims to provide strategic direction to the hospital organization, to ensure that the objectives are achieved, risks are managed and the resources available to be used according to the recommendations and instructions of national health authorities.

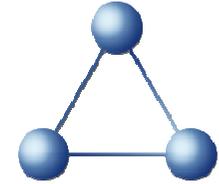

The hospital Governance defines rules, measures, tools to monitor, control, and enable the good management practices for a, private and/or public hospital.

As an objective, the Governance support must define a strategic orientation, proper resources, in order to manage the risks and to take into account the directives of the national Authorities.

This support will help to improve the management, the training and the setup of procedures for the starting up of the hospital.
